

Creating Tests From Software AG CentraSite Active SOA

SOAtest can create tests that enforce policies applied to Web service assets that are declared in a Software AG CentraSite Active SOA repository. You can select a service asset and choose the desired policies to enforce.

To enforce CentraSite Active SOA policies, complete the following:

1. Choose the **Other > CentraSite repository** option in one of the available test creation wizards. For details on accessing the wizards, see:
 - [Adding a New .tst File to an Existing Project](#)
 - [Adding a New Test Suite](#)
2. In the CentraSite wizard page, enter the location of the repository in the **URL** field, enter a **Username** and **Password**. To save these settings, click the **Save to Preferences** button.
3. Click the **Next** button and enter a service name query in the **Name Query** Field. This allows you to query for services by name that are registered in CentraSite Active SOA.
4. Click the **Next** button. A list of **Available Web Service Assets** corresponding to the entered query displays.

5. Select the desired service asset from the list and click the **Finish** button. SOAtest creates a test suite with the selected policies and tests whether these policies are enforced against the service assets.

Reporting Test Execution Results to CentraSite Active SOA

After running the test suite with the selected CentraSite Active SOA policies, you have instant access to quality data associated with the assets in CentraSite Active SOA.

For details on how to report results to CentraSite Active SOA, see [Using Software AG CentraSite Active SOA with SOAtest](#).
