

Migrating Repositories and Servers from Older Versions of Parasoft Virtualize or SOAtest

Due to the Data Repository Server upgrade in SOAtest and Virtualize 9.9.0, any Data Repository Servers created in previous versions of the products must be migrated before they can be used in the current version.

The migration process is automated with the Data Repository Server Migration utility. This utility is provided with in the Virtualize/SOAtest installation directory and described in the Virtualize/SOAtest documentation.
