

Using C++test on Safety-Related Software

C++test has been certified by TÜV SÜD to be qualified for safety-related software development. Parasoft customers who use C++test on safety-related software and want to benefit from the qualification should register on the Parasoft Customer Portal and apply for the C++test Functional Safety Distribution Package:

1. Log in to the Parasoft Customer Portal (<https://parasoft.force.com/customerportal>)
2. Go to Products & Licenses
3. Select "C++test Functional Safety Distribution Package" in the Downloads section.
4. Click "Download". A Parasoft representative will contact you for further actions.

The C++test Functional Safety Distribution Package provides information on:

- Platforms, environments, and functionalities prepared for operating on Functional Safety sensitive software
- Recommended configuration and customization options for testing Functional Safety sensitive software
- Known unresolved Functional Safety relevant defects and workarounds/solutions
