

Running Manual Tests and Collecting Coverage Data

A test session should already be running if you completed the previous section ([Setting Up CAM for Running Tests](#)).

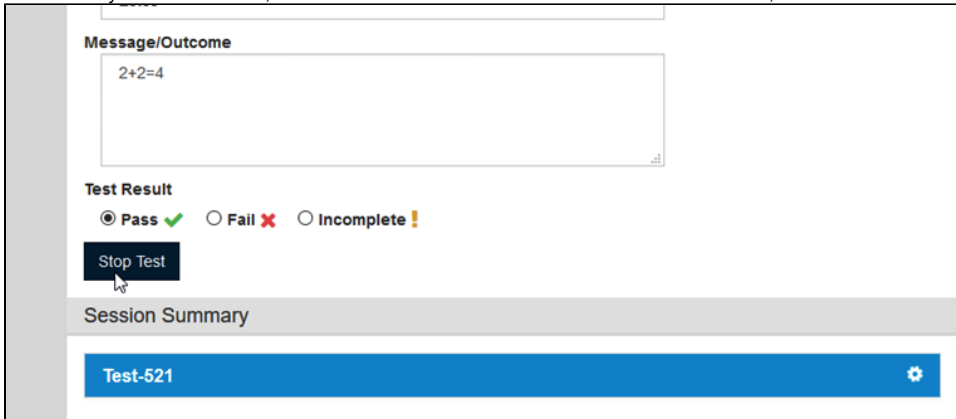

1. Click on the session in progress and click **New Test**.
2. Enter a name for the test (e.g., Test-521_ and click **Start Test**.

i From this point, the Coverage Agent will associate all collected coverage information with this new test until the test is stopped.

3. Enter the following information about the test:
 - Requirement ID: 12345
 - Author: Your Name
 - Message/Outcome: 2+2=4

4. Open the Calculator Application web page and exercise the application per the test requirements.
 - a. Enter 2 in the Param1 field.
 - b. Enter 2 in the Param2 field.
 - c. Click the + button.
 - d. Click the browser's **Back** button.
5. Exit the web page and close the application.
6. Enter test result information in the CAM window and click **Stop Test**.
7. If the result you observed is 4, then choose **Pass** in the Test Result section. Otherwise, choose **Fail**.

All collected data will be associated with the name given to the above test.

8. Click **Stop Session** and confirm that you want to stop the session when prompted.
