

Project Center

Parasoft Project Center delivers advanced task management that increases development teams' work quality and efficiency. Benefits include:

- Helping managers plan and track project progress and analyze completed projects in order to continuously improve SDLC processes.
- Providing developers with an exact plan of attack so that they firmly understand the project, tasks, and deadlines.
- Providing QA teams with development progress and the implementation status of project artifacts (requirements, tasks, defects/enhancements) so they know what's ready for testing.

Project Center ships with Development Testing Platform Enterprise. See [Upgrading DTP from Standard to Enterprise Edition](#) or contact your Parasoft representative for additional information.
