

# Prerequisites

This section describes the requirements to import and work with findings in an IDE. To perform code analysis, ensure that your system meets the minimum system requirements; see [Automation - Prerequisites](#).

## IDE

Parasoft C/C++test Standard can analyze locally buildable projects that are imported into your IDE. The following IDEs are supported:

- Eclipse 3.8 and 4.2-4.8
- Visual Studio 2008, 2010, 2012, 2013, 2015 and 2017

## Parasoft IDE Plugins

To integrate Parasoft C/C++test with your IDE, you need to install two plugins that are shipped with the product: the Parasoft Plugin and the C/C++test Plugin for your IDE. Both plugins are required to work with C/C++test from within your IDE.

-  The plugins must have the same version.
-  Ensure that the previous versions of the plugins and other Parasoft products are uninstalled from your IDE before you install the plugins.
