

WSDL Content Handler

This topic covers the WSDL Content Handler tool, which is used to pass a WSDL and its directly/indirectly imported WSDLs and schemas to chained tools.

Understanding WSDL Content Handler

This tool is rarely added to a test suite manually. More often, it is automatically generated from the New .tst/Test Suite wizard when applying Policy Configurations to enforce various coding standards with the Coding Standards tool.

Configuring WSDL Content Handler

The following option is available:

- **WSDL URI:** Specifies the WSDL to pass to chained tools. Click the **Browse** button to navigate to the appropriate WSDL file.
