

Toolbar Buttons

The following buttons are added to the toolbar:

Most buttons are self-explanatory. The following sections provide more detail on the following button:

- [Run Tests](#)

Run Tests

The **Run Tests** button allows you to quickly run any available Test Configuration.

If you simply click the **Run Tests** button, C++test will run a test based on the Favorite Test Configuration.

If you use the pull-down menu to the right of the **Run Tests** button, you can start a test using any of the available Test Configurations. The current Favorite Test Configuration will always be listed as the first command in the **Run Tests** pull-down menu, and will be followed by the preset 1, 2, and 3 favorites (which can be modified to suit your preferences), then the most recently-run Test Configurations, then by commands that provide access to User-defined Test Configurations, Built-in Test Configurations, and Team Test Configurations.
