

The C++test Perspective

The C++test perspective, which is built into the Eclipse workbench, provides a set of capabilities designed to help you configure, run, and review tests.

You can open this perspective in any of the following ways:

1. Click the **C++test Perspective** button in the shortcut bar (on the top right of the workbench).
2. Click the **Open Perspective** button in the shortcut bar, choose **Other**, then choose **C++test** in the **Select Perspective** dialog that opens.
3. Choose **Window > Open Perspective > Other**, then choose **C++test** in the **Select Perspective** dialog that opens.

The **C++test** perspective provides special views, toolbar buttons, and menu items you will use to configure, run, and review tests.
