

# Setting the Parasoft License

Connecting the DTP Plugin to DTP server (as described in [Connecting to DTP](#)) automatically configures your license.

But you will need to set the license manually if you don't have access to DTP or have the machine locked license:

1. Click **Parasoft** in the menu bar and choose **Options** (Visual Studio) or **Preferences** (Eclipse).
2. Select **License**.
3. Choose your license options and click **Apply**; contact your Parasoft representative if you experience issues with your license.

The screenshot shows a dialog box for setting the Parasoft license. It features a checkbox labeled "Start deactivated" which is currently unchecked. Below this, there are two radio buttons for "License": "Local" (which is selected) and "Network". Underneath, there are three input fields: "Machine id" containing the text "WIN32-9852734", "Expiration date" which is empty, and "Password" containing the text "1234512345". A small button with three dots is located to the right of the password field.
