

# Installation 1

C/C++test is distributed as a ZIP installation package. Extract the package to the desired location to install the product. The `cpptest` directory (`[INSTALL_DIR]`) that contains all C/C++test files will be created.

No additional steps are required, but for your convenience, we recommend that you:

- Add the `[INSTALL_DIR]` path to `$PATH` to enable convenient access to the `cpptestcli` executable.
- Add `[INSTALL_DIR]/bin` to `$PATH` to enable convenient access to utility tools, including the tool for instrumenting code to collect coverage information (`cpptestcc`).

 Remove the installation directory from disk to uninstall C/C++test.
