

# Prerequisites

This section describes the requirements to import and work with findings in an IDE. To perform code analysis, ensure that your system meets the minimum system requirements; see [Automation - Prerequisites](#).

## IDE

Parasoft dotTEST can analyze locally buildable projects that are imported into your IDE. The following IDEs are supported:

- Visual Studio 2012, 2013, 2015 and 2017

## Parasoft IDE Plugins

To integrate Parasoft dotTEST with your IDE, you need to install two plugins that are shipped with the product: the Parasoft Plugin and the dotTEST Plugin for your IDE. Both plugins are required to work with dotTEST from within your IDE.

-  The plugins must have the same version.
-  Ensure that the previous versions of the plugins and other Parasoft products are uninstalled from your IDE before you install the plugins.
