

Accessing Existing SOAtest Test Scenarios

To access, manage, and extend any test assets available on your team's SOAtest server, your SOAtest servers needs to be connected to CTP via SOAtest's **Parasoft> Preferences> CTP** preferences. For details, see [Integrating Virtualize Server and/or SOAtest Server with CTP](#).

To make any existing SOAtest test scenario available to CTP, place them in the TestAssets project of a connected SOAtest server. If this project does not already exist, you will need to create it.
