

You can import findings into the IDE from DTP server or from an .xml report file. The filter must be configured in order to download findings from DTP (see [Customizing Import Options](#)). If you cannot choose a filter from the filter configuration drop-down menu, verify that you have appropriate access in DTP (see "Project Creation and Configuration" in the DTP documentation for additional information).

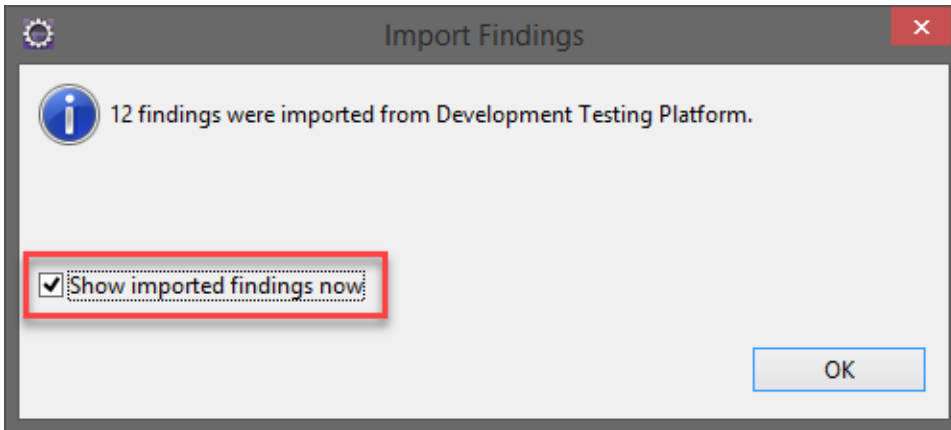

Choose **Parasoft> Import Findings** to quickly import findings from the enabled DTP server (see [Connecting to DTP](#)) according to the Import Options configuration (see [Customizing Import Options](#)). You can also import findings from the Findings view menus.

1. If not already open, choose **Parasoft> Show View> Findings** from the IDE main menu.
2. Click the Findings view menu drop-down and choose **Import from> DTP** or **Local File or URL...**

If you chose to import findings from DTP, then the import will begin immediately.
If you are importing from an .xml file, either enter the URL of the file or browse for the file when prompted to begin the import.
An alert will tell you how many findings were imported.

3. Enable the **Show imported findings now** option in the alert and click **OK** to load the findings into the Findings view.

If the imported findings are associated with a file that has been modified, a message appears specifying the file(s) that are out of sync. The markers associated with these findings (including the line numbers) may not match the location in the local resource files or may indicate findings that have already been resolved.
Findings associated with resources missing locally are not imported and the displayed message lists the files that are unavailable.

Import Findings

63 findings were imported from Development Testing Platform.

 Some of the imported findings are associated with resources that have been modified. Their finding markers may not match their location in the resource files. The findings associated with missing resources have not been imported.

Changed (imported):

- /demo/src/examples/eval/Simple.java
- /demo/src/examples/flowanalysis/AlwaysCloseGSS.java
- /demo/src/examples/flowanalysis/AlwaysCloseLogging.java
- /demo/src/examples/flowanalysis/AlwaysCloseNIOChannels.java
- /demo/src/examples/flowanalysis/AlwaysCloseSockets.java
- /demo/src/examples/flowanalysis/DivisionByZero.java
- /demo/src/examples/flowanalysis/UseBeforeInConstructorInitialization.java
- /demo/src/examples/nbank/Account.java
- /demo/src/examples/nbank/CreditCard.java
- /demo/src/examples/nbank/Customer.java
- /demo/src/examples/nbank/LogAccountInfo.java
- /demo/src/examples/nbank/WithdrawalTransaction.java
- /demo/src/examples/queue/Queue.java
- /demo/src/examples/security/InputValidation.java
- /demo/tests/examples/junit4/MoneyTest.java
- /demo/tests/examples/stubs/InterpreterTest.java

Missing (not imported):

- /UTA_jexamples/src/jexamples/BinaryConverter.java
