

Reviewing Modifications Made from Environment Manager

Environment Manager automatically tracks all changes that each user makes. This enables you to audit and document what was changed, by whom, and when.

To view a list of all recent changes, open the **Reports** tab, then select **Modification History**.

You can then zero in on all changes for a specific asset by clicking the asset's name.

If you want to save a record of changes, click the **CSV** button in the bottom left of the table. Once the archive is created, click the link to the archive that's shown.
