

# CLI Exit Codes

soatestcli uses the following exit codes when it encounters a problem:

Code	Meaning
130	Command-line is malformed or refers to a resource that does not exist.
131	Eclipse is already running in the same workspace.
133	Parser configuration error. The XML parser cannot be found or instantiated.
134	Command-line is not licensed.
135	Test process exited with an exception. Check error log.
2	Static analysis violations. This exit code is only applicable when running soatestcli with the <code>-fail</code> switch. See <a href="#">CLI Options</a> for additional information.
4	Functional test violations. This exit code is only applicable when running soatestcli with the <code>-fail</code> switch. See <a href="#">CLI Options</a> for additional information.
8	Code review violations. This exit code is only applicable when running soatestcli with the <code>-fail</code> switch. See <a href="#">CLI Options</a> for additional information.
1	Any other problem. This exit code is only applicable when running soatestcli with the <code>-fail</code> switch. See <a href="#">CLI Options</a> for additional information.
