

Deploying CAM and the Application with Tomcat

1. Copy the Calculator.war file from the %WORKING_DIR%\calculator\target\ directory to the %TOMCAT_DIR%\webapps directory.
2. Copy the downloaded Parasoft cam.war file from the %WORKING_DIR% directory to the %TOMCAT_DIR%\webapps directory.
3. Open a command window and run C:\Working\CAM\envSetup.bat.
4. Change to the %TOMCAT_DIR%\bin directory and run the catalina start command to start the Tomcat server.
5. Open the following URL in a web browser:
<http://localhost:7080/cam>

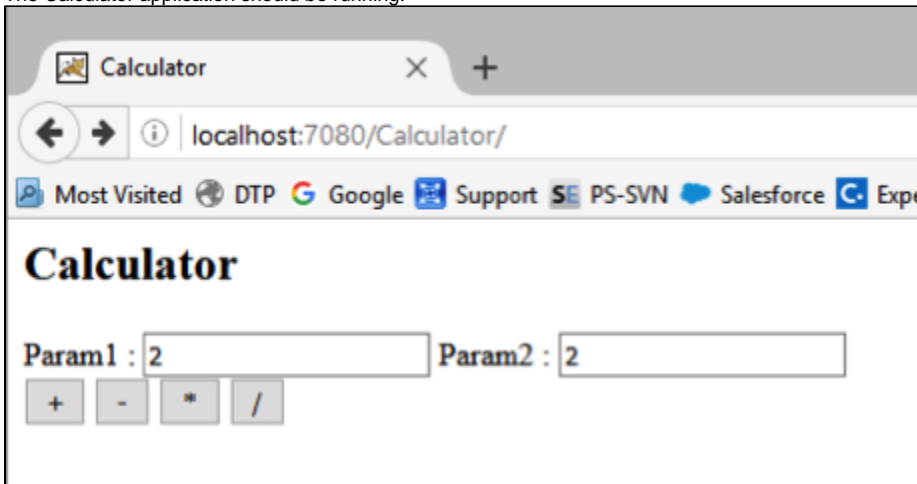

The Coverage Agent Manager should be running.

6. Open the following URL in a web browser:

<http://localhost:7080/Calculator>

The Calculator application should be running.

7. Interact with the application as a sanity check using the **Back** button of your web browser to return the application after performing a few test calculations.
