

Project Creation and Configuration with Altium TASKING VX-toolset for TriCore Support

C++test does not provide a dedicated project import wizard for importing TASKING IDE projects. We recommend that you import TASKING IDE projects by using a build data file (for more details see [Creating a Project Using an Existing Build System](#)) or recreate them in C++test by setting all options manually.

- Static Analysis

After the project has been successfully imported, no additional configuration steps are required for running static analysis.

For details on performing static analysis, see [Static Code Analysis](#) and [Flow Analysis](#).
