

Working with Unit Test Findings

Jtest allows you to view test execution results and coverage information that have been imported from DTP server or from an XML file (see [Importing Unit Test Findings](#)).

See the following sections for information how to view findings and customize their presentation:

- [Viewing Findings](#)
- [Customizing the Findings View](#)
- [Viewing Details about Analysis Findings](#)
- [Viewing Coverage](#)

If you run unit tests with Eclipse, you can collect coverage for JUnit tests and view test execution findings in your IDE, see [Executing and Collecting Coverage for JUnit Tests](#).
