

Exploring and Accessing the Available Files

In Marketplace, you can explore, download, and deploy files that have been added to your private marketplace.

To download a file:

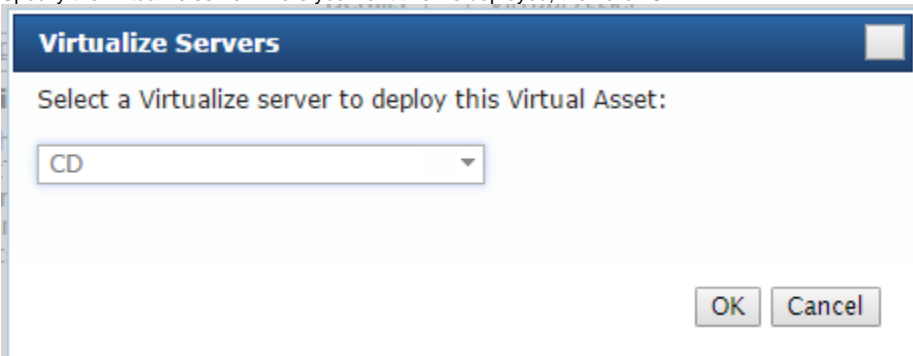

1. Expand that file's marketplace listing.
2. Click the **Download** button.

To deploy a file on a connected Virtualize server:

1. Expand that file's marketplace listing.
2. Click the **Deploy** button.

3. Specify the Virtualize server where you want this file deployed, then click **OK**.

If you are deploying an archive of virtual assets with associated data repositories (described in [Uploading Archives Including Virtual Assets and Data Repositories](#)), you will also be prompted to specify how to connect to the Data Repository Server where you want the archived repositories deployed.
