

# Reviewing Specific Event Logs

To review the event log for a specific asset or resource:

- Click the **Messages** link at the top of the page for the asset or resource whose events you want to review (e.g., an environment, a Virtualize server, a proxy, a deployed virtual asset).

The monitored events will be displayed in the Event Log view in the order in which they occurred. The event log for a Virtualize server will show events for the server as well as events for any monitored assets deployed on that server.
