

Enabling and Configuring Unit Test Assistant

To create, execute and modify tests with Unit Test Assistant, you need to enable the Unit Test Assistant Interface, as well as configure preferences to specify your testing frameworks and types of recommendations UTA will display. See the following sections for details:

- [UTA Requirements](#)
- [Configuring Preferences](#)
- [Enabling the Unit Test Assistant Interface](#)
- [About UTA Actions](#)
- [Adding Required Dependencies](#)
- [Configuring Factory Methods](#)
