

# Assessing Change Impacts

CTP's Change Impact Reports automatically identify the artifacts that would be impacted by changes to a given asset (component, proxy, virtual asset, etc.).

To see the artifacts that could be impacted by a change to a particular asset:

1. Open the page for that asset (e.g., by searching for it or browsing available assets as described in [Exploring the Available Artifacts and Resources](#)).
2. Click the **Change Impact** link in the page header.

## Virtual Asset File

[Change Impact](#)

Name: LoanProcessor  
Description: None  
Filepath: LoanProcessor.pva  
Server: emdemo

CTP will then open a report summarizing, listing, and linking to the impacted artifacts. You can export this list to a CSV file by choosing **Export to CSV** from the page-level action menu.

## Change Impact

Virtual Asset File: [LoanProcessor](#)  
Belongs to:  
Server: emdemo

### Impacted Resources:

- [Component Instances : 1](#)
- [Deployed Virtual Assets : 1](#)

### Component Instances:

**Virtual Loan Processor**  
Loan Service

### Deployed Virtual Assets:

Name	Server	Asset
<a href="#">LoanProcessor</a>	emdemo	<a href="#">LoanProcessor</a>
