

License Server Overview

License Server is a module shipped with DTP that enables you to manage licenses for Parasoft products deployed to your network. Upload the product licenses you received from Parasoft to License Server. When a tool is configured to connect to DTP, License Server will provide a license if a token is available. You can restrict and allocate license tokens as necessary.

License Server Home Screen

The License Server homepage contains quick links to commonly used interfaces.

License Server Menu

The following tabs link to specific License Server functions.

General Tab

- Choose **Parasoft License** to configure your DTP license.
- Choose **License Server Configuration** to port, access log, and other settings.
- Choose **Logout** to log out of

DTP.

Management Tab

- Choose **Add New License** to configure additional licenses provided by Parasoft. See [Adding and Managing Licenses](#).
- Choose **Manage Licenses** to access functionality for updating licenses served from License Server. See [Adding and Managing Licenses](#).
- Choose **License Summary** for an overview of the license tokens that are currently being served to tools that have requested licenses. See [Viewing License Statistics](#).
- Choose **Manage Groups** to create and manage filters that determine access to license tokens. See [Filtering by Group](#).
- Choose **View Supported Tools** to show which tools and version are supported by your installation.
- Choose **View Access Logs** to view the License Server access logs. See [Viewing Log Files](#).
- Choose **Tool Usage** to access the tools usage API documentation . See [Viewing Tool License Usage](#).
