

Command Line Exit Codes

C/C++test uses the following exit codes:

Code	Meaning
0	Successful completion.
130	Command-line is malformed or refers to a resource that does not exist.
131	The workspace is busy.
134	A license problem has been encountered.
135	The process exited with an exception. Check error log.
136	A test configuration problem has been encountered.
137	There was an error with the input scope.
138	There was an error with the compiler configuration.
139	There was an error with the rule configuration.
140	A settings problem has been encountered.
0x2 ¹	Static analysis violations. This exit code is only applicable when running <code>cpptestcli</code> with the <code>-fail</code> switch.
0x4 ¹	Unit test violations. This exit code is only applicable when running <code>cpptestcli</code> with the <code>-fail</code> switch.

¹ The process can exit with a combination of these values if a problem of a different type is encountered.
