

The Event Details Perspective

The Parasoft Event Details perspective shows a detailed chronological sequence of all the events that occurred between the start and end of the test (for instance, all requests sent, responses received, data source rows used, wait times, navigation tasks, and so on).

You can open this perspective in any of the following ways:

- Choose **Window> Perspective> Open Perspective> Parasoft Event Details**.
- Click the **Open Perspective** button in the shortcut bar and choose **Parasoft Event Details** in the **Open Perspective** dialog.
- (After the perspective has been opened once) Click the **ParasoftEvent Details** button in the shortcut bar (on the top right of the workbench).

For details on using this perspective to gain insight into events, see [Exploring Test Event Details](#).
