Customizing Console Verbosity

To modify the level of detail reported in the Console:

1. Click **Parasoft** in the menu bar and choose **Options**.
2. Select **Console.**
3. Set your console output settings. Options are:
    - **Low**: Configures the Console view to show errors and basic information about the current step's name and status (done, failed, up-to-date).
    - **Normal**: Adds command lines and issues reported during test and analysis.
    - **High**: Uses full-format violation listings and also reports warnings.
    - **Show console on any change:** Determines whether the console is brought to the front any time its content changes.
